We are Here to Help

APE Companies and its team of experts from numerous industries are here to help. With its iComply program we can help the contractor through our distribution chain with OSHA compliance.

What is Silica?

- Silica is quartz, and is found naturally in almost all rock, sand, soil, brick and concrete products
- Respirable crystalline silica particles penetrate deep into the lungs causing lung disease
- Silica exposure remains a serious threat to nearly 2 million U.S. working, including more than 100,000 workers in high risk jobs such as abrasive blasting, foundry work, stone-cutting, rock drilling, quarry work and tunneling

Dust Extraction Systems For All Industries

"The tools that we need to protect workers are already out there. They're available. They're not prohibitively expensive, and they need to be implemented."

-Deven Johnson
Director of Training, Health and Safety for the Operative Plasterers' and Cement Masons' International Association

Silica Health Hazards

Symptoms

Shortness of breath
Loss of appetite
Chest pains

Fatigue
Severe Cough
Cyanosis (bluish skin)

Silicosis

A non-reversible lung disease with diffuse nodular pulmonary fibrosis

Acute Silicosis
Chronic Silicosis
Accelerated Silicosis

COPD

(Chronic obstructive pulmonary disease)
A lung disease that causes obstructed airflow from the lungs by becoming thick and inflamed while air sacs lose their elastic quality. Too much mucus is made and blocks airways

How do I Comply?

- Exposure determination
- Use Table 1 or Monitor exposure
- Create a written exposure plan
- Designate a competent person
- Provide medical surveillance
- Provide proper training
- Required recordkeeping
- Use proper HEPA dust collection

How to Choose a HEPA Vacuum

Important points of requirements

- High quality HEPA filters that are tested and certified, with a rating of at least 99.99 at 0.3 micron
- 25 CFM PER BLADE INCHES REQUIRED FOR HAND GRINDERS
- High CFM & Water Lift for proper matching to equipment
- Must have a mechanical filter cleaning method, contained allowing no dust to escape
- Multi levels of filtration, that include a cyclonic chamber, pre-filters, HEPA's and pre-separators
- Drop down bagging containment systems, no dust can or tray
- **Availability to attach tools for collection at the source**
- Wet and dry availability when needed
